

National Cancer Patient Experience Survey

2019 Results

Thames Valley

Published June 2020

Executive Summary

Cancer Dashboard Questions

The following seven questions are included in phase 1 of the Cancer Dashboard developed by Public Health England and NHS England:

Q61. Patient's average rating of care scored from very poor to very good

Q18. Patient definitely involved as much as they wanted in decisions about care and treatment

Q19. Patient given the name of a CNS who would support them through their treatment

Q20. Patient found it very or quite easy to contact their CNS

Q39. Patient always felt they were treated with respect and dignity while in hospital

Q41. Hospital staff told patient who to contact if worried about condition or treatment after leaving hospital

Q55. General practice staff definitely did everything they could to support patient during treatment

Questions Outside Expected Range

	Case Mix Adjusted Scores			National Score
	2019 Score	Lower Expected Range	Upper Expected Range	
Q33. Patient had confidence and trust in all the ward nurses treating them	78%	71%	77%	74%
Q34. Patient thought there were always or nearly always enough nurses on duty to care for them	71%	60%	69%	64%
Q36. Patient always given enough privacy when discussing condition or treatment	87%	83%	87%	85%
Q40. Patient given clear written information about what should or should not do after leaving hospital	89%	84%	88%	86%

	Case Mix Adjusted Scores			National Score
	2019 Score	Lower Expected Range	Upper Expected Range	
Q21. Patient got understandable answers to important questions all or most of the time	85%	85%	90%	87%
Q50. Patient given enough information about whether chemotherapy was working in a completely understandable way	64%	64%	71%	68%

Introduction

The National Cancer Patient Experience Survey 2019 is the ninth iteration of the survey first undertaken in 2010. It has been designed to monitor national progress on cancer care; to provide information to drive local quality improvements; to assist commissioners and providers of cancer care; and to inform the work of the various charities and stakeholder groups supporting cancer patients.

The survey was overseen by a national Cancer Patient Experience Advisory Group. This Advisory Group set the principles and objectives of the survey programme and guided questionnaire development. The survey was commissioned and managed by NHS England. The survey provider, Picker, is responsible for designing, running and analysing the survey.

The 2019 survey involved 143 NHS Trusts. Out of 111,366 people, 67,858 people responded to the survey, yielding a response rate of 61%.

Methodology

Eligibility, fieldwork and survey methods

The sample for the survey included all adult (aged 16 and over) NHS patients, with a confirmed primary diagnosis of cancer, discharged from an NHS Trust after an inpatient episode or day case attendance for cancer related treatment in the months of April, May and June 2019. The fieldwork for the survey was undertaken between December 2019 and March 2020.

As in the previous four years, the survey used a mixed mode methodology. Questionnaires were sent by post, with two reminders where necessary, but also included an option to complete the questionnaire online. A Freephone helpline and email was available for respondents to opt out, ask questions about the survey, enable them to complete their questionnaire over the phone and provide access to a translation and interpreting facility for those whose first language was not English.

Case-mix adjustment

Both unadjusted and adjusted scores are presented in this report. Case-mix adjusted scores allows us to account for the impact that differing patient populations might have on results. By using the case-mix adjusted estimates we can obtain a greater understanding of how a Cancer Alliance is performing given their patient population. The factors taken into account in this case-mix adjustment are gender, age, ethnic group, deprivation, and tumour group.

Scoring methodology

Fifty-two questions from the questionnaire are scored as these questions relate directly to patient experience. For all but one question (Q61), scores are presented as the percentage of positive responses out of all scored responses. For Q61, respondents rate their overall care on a scale of 0 to 10, of which the average was calculated for this question's presented score. The percentages in this report have been rounded to the nearest percentage point. Therefore, in some cases the figures do not appear to add up to 100%.

Statistical significance

In the reporting of 2019 results, appropriate statistical tests have been undertaken to identify unadjusted scores for which the change over time is 'statistically significant'. Thirty-seven scored questions in 2019 have been compared with those of 2018 and a statistically significant change between the two years has been reported where identified.

For the scored questions that are comparable beyond 2018, statistically significant change over the five years has also been reported where identified. A statistically significant difference means that the change in the result is very unlikely to have occurred by sampling variation.

Suppression

Question-level suppression

For scores where the base size per question is <21, the score will be suppressed and replaced with an asterisk (*). The base size will include neutral response options.

Double suppression

If any group within a particular sub-group breakdown (such as the tumour group breakdown) has <21 responses, then the figure for this particular group is suppressed and replaced with an asterisk (*). If there is only one group within the sub-group breakdown that has <21 respondents, and is therefore suppressed, the group with the next

lowest number of respondents is also suppressed and replaced with an asterisk (*) (regardless if it is greater than or less than 21).

Understanding the results

This report shows how this Alliance scored for each question in the survey, compared with national results and previous year's results. It is aimed at helping individual Alliances to understand their performance and identify areas for local improvement. Below is a description of the type of results presented within this report and how to understand them.

Expected range charts

The expected range charts in this report show a bar with the lowest and highest score received for each question nationally. Within this bar, an expected range is given (in grey) and a black diamond represents the actual score for this Alliance.

Alliances whose score is above the upper limit of the expected range (in the dark blue) are positive outliers, with a score statistically significantly higher than the national mean. This indicates that the Alliance performs better than what Alliances of the same size and demographics are expected to perform. The opposite is true if the score is below the lower limit of the expected range (in the light blue); these are negative outliers. For scores within the expected range (in the grey), the score is what we would expect given the Alliance's size and demographics.

Comparability tables

The comparability tables show the 2018 and 2019 unadjusted scores for this Alliance for each scored question. If there is a significant change from 2018 and 2019 or overall from 2016 to 2019, an arrow will be presented for the direction of change. The adjusted 2019 score will also be presented for each scored question along with the lower and upper expected range and national score. Scores above the upper limit of the expected range will be highlighted dark blue, scores below the lower limit of the expected range will be highlighted light blue, and scores within the lower and upper limit of the expected ranges will be highlighted grey.

Tumour type tables

The tumour type tables show the unadjusted scores for each scored question for each of the 13 tumour groups. The national score for that tumour group is also shown. Unadjusted scores for the same tumour type across different Alliances may not be comparable, as they do not account for the impact that differing patient populations might have on results. Central nervous system is abbreviated as 'CNS' and lower gastrointestinal tract is abbreviated as 'LGT' throughout this report.

Year on year charts

The year on year charts show four columns representing the unadjusted scores of the last four years (2016, 2017, 2018 and 2019) for each scored question.

Notes on specific questions

Following the development phase of the 2019 survey, several changes were made to the questionnaire. Six scored questions were amended (Q5, Q18, Q30, Q35, Q56 and Q60) and one non-scored question (Q29) was amended that impacted the comparability of questions Q30 to Q41. Of all questions changed or impacted by change, only Q60 is presented with historical comparisons; though the results should be interpreted with caution.

Unadjusted data and case-mix adjusted data

Unadjusted data should be used to see the actual responses from patients relating to the Alliance. Case-mix adjusted data, together with expected ranges, should be used to understand whether the results are significantly higher or lower than national results taking account of the patient mix.

Further information

This research was carried out in accordance with the international standard for organisations conducting social research (accreditation to ISO20252:2012; certificate number GB08/74322). The 2019 survey data has been produced and published in line with the Code of Practice for Official Statistics.

For more information on the methodology, please see the Technical Document. It can be viewed along with the 2019 questionnaire and survey guidance on the website at www.ncpes.co.uk. For all other outputs at National, Trust, CCG and Cancer Alliance level, please see the PDF reports, Excel tables and dashboards at www.ncpes.co.uk.

Response Rate

Overall Response Rate

2,965 patients responded out of a total of 4,859 patients, resulting in a response rate of 61%.

	Sample Size	Adjusted Sample	Completed	Response Rate
Alliance	5,193	4,859	2,965	61%
National	119,855	111,366	67,858	61%

Respondents by Survey Type

	Number of Respondents
Online	331
Paper	2,634
Phone	0
Translation Service	0

Respondents by Tumour Group

	Number of Respondents
Brain / CNS	12
Breast	748
Colorectal / LGT	313
Gynaecological	126
Haematological	381
Head and Neck	72
Lung	166
Prostate	398
Sarcoma	40
Skin	98
Upper Gastro	90
Urological	285
Other	236

Respondents by Age and Gender

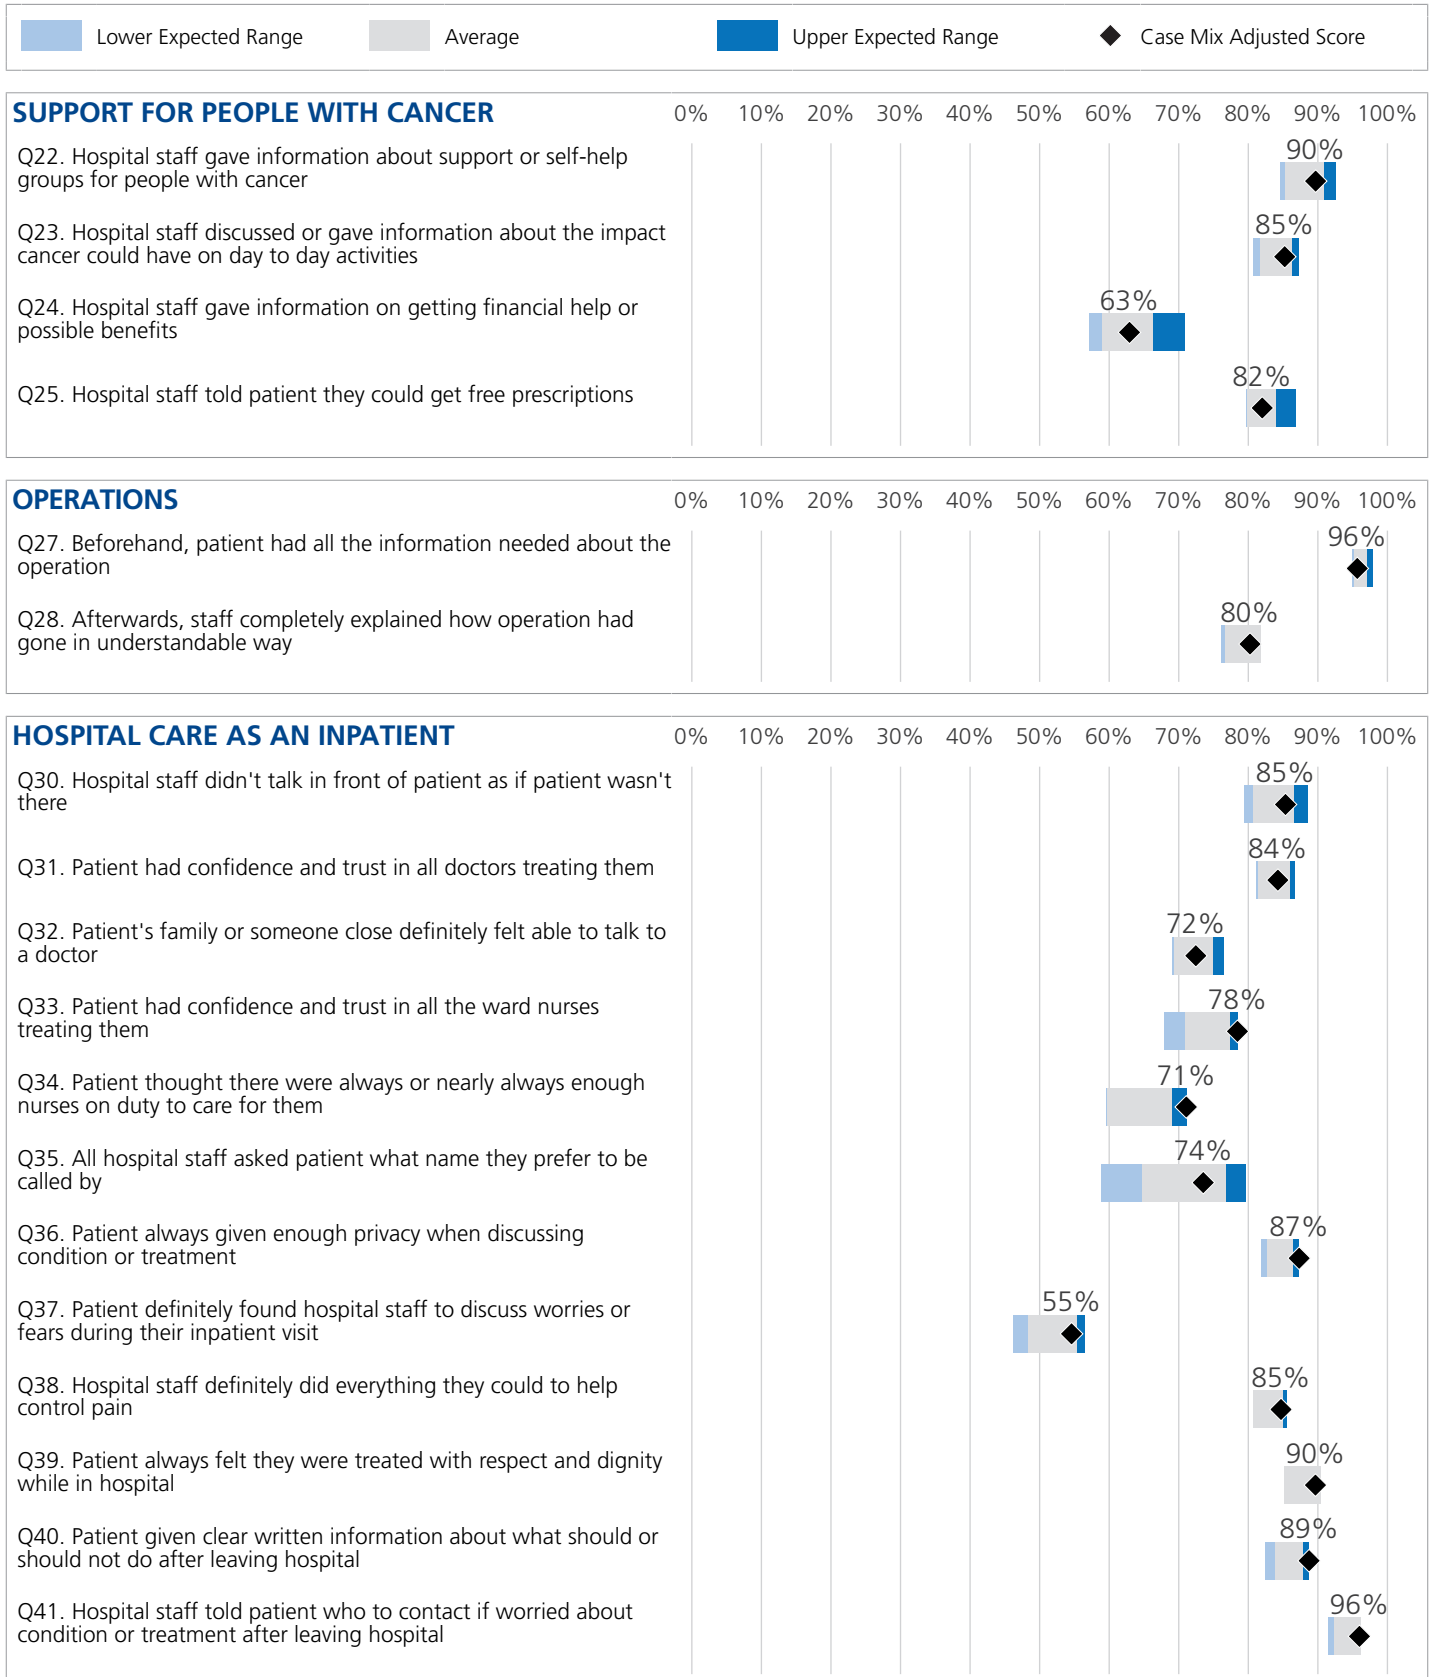

Respondents year of birth has been used to determine age. This information has been amalgamated into 8 age bands. The age and gender distribution for the Alliance was as follows:

	Age 16-24	Age 25-34	Age 35-44	Age 45-54	Age 55-64	Age 65-74	Age 75-84	Age 85+	Total
Male	4	8	8	78	286	563	415	95	1,457
Female	4	20	70	234	341	484	286	69	1,508
Total	8	28	78	312	627	1,047	701	164	2,965
