

National Cancer Patient Experience Survey

2019 Results

Torbay and South Devon NHS Foundation Trust

Published June 2020

Executive Summary

Cancer Dashboard Questions

The following seven questions are included in phase 1 of the Cancer Dashboard developed by Public Health England and NHS England:

Q61. Patient's average rating of care scored from very poor to very good

Q18. Patient definitely involved as much as they wanted in decisions about care and treatment

Q19. Patient given the name of a CNS who would support them through their treatment

Q20. Patient found it very or quite easy to contact their CNS

Q39. Patient always felt they were treated with respect and dignity while in hospital

Q41. Hospital staff told patient who to contact if worried about condition or treatment after leaving hospital

Q55. General practice staff definitely did everything they could to support patient during treatment

Questions Outside Expected Range

	Case Mix Adjusted Scores			National Score
	2019 Score	Lower Expected Range	Upper Expected Range	
Q5. Received all the information needed about the test	98%	93%	97%	95%
Q7. Test results explained in completely understandable way	86%	76%	84%	80%
Q19. Patient given the name of a CNS who would support them through their treatment	96%	89%	95%	92%
Q22. Hospital staff gave information about support or self-help groups for people with cancer	92%	84%	92%	88%
Q23. Hospital staff discussed or gave information about the impact cancer could have on day to day activities	89%	79%	88%	84%
Q24. Hospital staff gave information on getting financial help or possible benefits	75%	55%	70%	63%

Introduction

The National Cancer Patient Experience Survey 2019 is the ninth iteration of the survey first undertaken in 2010. It has been designed to monitor national progress on cancer care; to provide information to drive local quality improvements; to assist commissioners and providers of cancer care; and to inform the work of the various charities and stakeholder groups supporting cancer patients.

The survey was overseen by a national Cancer Patient Experience Advisory Group. This Advisory Group set the principles and objectives of the survey programme and guided questionnaire development. The survey was commissioned and managed by NHS England. The survey provider, Picker, is responsible for designing, running and analysing the survey.

The 2019 survey involved 143 NHS Trusts. Out of 111,366 people, 67,858 people responded to the survey, yielding a response rate of 61%.

Methodology

Eligibility, fieldwork and survey methods

The sample for the survey included all adult (aged 16 and over) NHS patients, with a confirmed primary diagnosis of cancer, discharged from an NHS Trust after an inpatient episode or day case attendance for cancer related treatment in the months of April, May and June 2019. The fieldwork for the survey was undertaken between December 2019 and March 2020.

As in the previous four years, the survey used a mixed mode methodology. Questionnaires were sent by post, with two reminders where necessary, but also included an option to complete the questionnaire online. A Freephone helpline and email was available for respondents to opt out, ask questions about the survey, enable them to complete their questionnaire over the phone and provide access to a translation and interpreting facility for those whose first language was not English.

Case-mix adjustment

Both unadjusted and adjusted scores are presented in this report. Case-mix adjusted scores allows us to account for the impact that differing patient populations might have on results. By using the case-mix adjusted estimates we can obtain a greater understanding of how a Trust is performing given their patient population. The factors taken into account in this case-mix adjustment are gender, age, ethnic group, deprivation, and tumour group.

Scoring methodology

Fifty-two questions from the questionnaire are scored as these questions relate directly to patient experience. For all but one question (Q61), scores are presented as the percentage of positive responses out of all scored responses. For Q61, respondents rate their overall care on a scale of 0 to 10, of which the average was calculated for this question's presented score. The percentages in this report have been rounded to the nearest percentage point. Therefore, in some cases the figures do not appear to add up to 100%.

Statistical significance

In the reporting of 2019 results, appropriate statistical tests have been undertaken to identify unadjusted scores for which the change over time is 'statistically significant'. Thirty-seven scored questions in 2019 have been compared with those of 2018 and a statistically significant change between the two years has been reported where identified.

For the scored questions that are comparable beyond 2018, statistically significant change over the five years has also been reported where identified. A statistically significant difference means that the change in the result is very unlikely to have occurred by sampling variation.

Suppression

Question-level suppression

For scores where the base size per question is <21, the score will be suppressed and replaced with an asterisk (*). The base size will include neutral response options.

Double suppression

If any group within a particular sub-group breakdown (such as the tumour group breakdown) has <21 responses, then the figure for this particular group is suppressed and replaced with an asterisk (*). If there is only one group within the sub-group breakdown that has <21 respondents, and is therefore suppressed, the group with the next lowest number of respondents is also suppressed and replaced with an asterisk (*) (regardless if it is greater than or less than 21).

Understanding the results

This report shows how this Trust scored for each question in the survey, compared with national results and previous year's results. It is aimed at helping individual Trusts to understand their performance and identify areas for local improvement. Below is a description of the type of results presented within this report and how to understand them.

Expected range charts

The expected range charts in this report show a bar with the lowest and highest score received for each question nationally. Within this bar, an expected range is given (in grey) and a black diamond represents the actual score for this Trust.

Trusts whose score is above the upper limit of the expected range (in the dark blue) are positive outliers, with a score statistically significantly higher than the national mean. This indicates that the Trust performs better than what Trusts of the same size and demographics are expected to perform. The opposite is true if the score is below the lower limit of the expected range (in the light blue); these are negative outliers. For scores within the expected range (in the grey), the score is what we would expect given the Trust's size and demographics.

Comparability tables

The comparability tables show the 2018 and 2019 unadjusted scores for this Trust for each scored question. If there is a significant change from 2018 and 2019 or overall from 2015 to 2019, an arrow will be presented for the direction of change. The adjusted 2019 score will also be presented for each scored question along with the lower and upper expected range and national score. Scores above the upper limit of the expected range will be highlighted dark blue, scores below the lower limit of the expected range will be highlighted light blue, and scores within the lower and upper limit of the expected ranges will be highlighted grey.

Tumour type tables

The tumour type tables show the unadjusted scores for each scored question for each of the 13 tumour groups. The national score for that tumour group is also shown. Unadjusted scores for the same tumour type across different Trusts may not be comparable, as they do not account for the impact that differing patient populations might have on results. Central nervous system is abbreviated as 'CNS' and lower gastrointestinal tract is abbreviated as 'LGT' throughout this report.

Year on year charts

The year on year charts show five columns representing the unadjusted scores of the last five years (2015, 2016, 2017, 2018 and 2019) for each scored question.

Notes on specific questions

Following the development phase of the 2019 survey, several changes were made to the questionnaire. Six scored questions were amended (Q5, Q18, Q30, Q35, Q56 and Q60) and one non-scored question (Q29) was amended that impacted the comparability of questions Q30 to Q41. Of all questions changed or impacted by change, only Q60 is presented with historical comparisons; though the results should be interpreted with caution.

Unadjusted data and case-mix adjusted data

Unadjusted data should be used to see the actual responses from patients relating to the Trust. Case-mix adjusted data, together with expected ranges, should be used to understand whether the results are significantly higher or lower than national results taking account of the patient mix.

Further information

This research was carried out in accordance with the international standard for organisations conducting social research (accreditation to ISO20252:2012; certificate number GB08/74322). The 2019 survey data has been produced and published in line with the Code of Practice for Official Statistics.

For more information on the methodology, please see the Technical Document. It can be viewed along with the 2019 questionnaire and survey guidance on the website at www.ncpes.co.uk. For all other outputs at National, Trust, CCG and Cancer Alliance level, please see the PDF reports, Excel tables and dashboards at www.ncpes.co.uk.

Response Rate

Overall Response Rate

394 patients responded out of a total of 557 patients, resulting in a response rate of 71%.

	Sample Size	Adjusted Sample	Completed	Response Rate
Trust	605	557	394	71%
National	119,855	111,366	67,858	61%

Respondents by Survey Type

	Number of Respondents
Online	31
Paper	363
Phone	0
Translation Service	0

Respondents by Tumour Group

	Number of Respondents
Brain / CNS	2
Breast	95
Colorectal / LGT	38
