

Cancer Patient Experience Survey

2020 Results

York Teaching Hospital NHS Foundation Trust

Published November 2021

Executive Summary

Cancer Dashboard Questions

The following seven questions are included in phase 1 of the Cancer Dashboard developed by Public Health England and NHS England:

Q61. Patient's average rating of care scored from very poor to very good

Q18. Patient definitely involved as much as they wanted in decisions about care and treatment

Q19. Patient given the name of a CNS who would support them through their treatment

Q20. Patient found it very or quite easy to contact their CNS

Q39. Patient always felt they were treated with respect and dignity while in hospital

Q41. Hospital staff told patient who to contact if worried about condition or treatment after leaving hospital

Q55. General practice staff definitely did everything they could to support patient during treatment

Introduction

The Cancer Patient Experience Survey 2020 is the 10th iteration of the survey first undertaken in 2010. It has been designed to monitor progress on cancer care; to provide information to drive local quality improvements; to assist commissioners and providers of cancer care; and to inform the work of the various charities and stakeholder groups supporting cancer patients.

The survey was overseen by a national Cancer Patient Experience Advisory Group. This Advisory Group set the principles and objectives of the survey programme and guided questionnaire development. The survey was commissioned and managed by NHS England. The survey provider, Picker, is responsible for designing, running and analysing the survey.

The Cancer Patient Experience Survey 2020 differs from all previous years in that the survey was run on a voluntary basis due to unprecedented pressures on cancer services in 2020.

The 2020 survey involved 55 NHS Trusts. As not all NHS Trusts participated in the survey no comparisons to scores nationally are shown.

Out of 33,266 people, 19,610 people responded to the survey, yielding a response rate of 59%.

Methodology

Eligibility, fieldwork and survey methods

The sample for the survey included all adult (aged 16 and over) NHS patients, with a confirmed primary diagnosis of cancer, discharged from an NHS Trust after an inpatient episode or day case attendance for cancer related treatment in the months of April, May and June 2020. The fieldwork for the survey was undertaken between April 2021 and June 2021.

As in the previous five years, the survey used a mixed mode methodology. Questionnaires were sent by post, with two reminders where necessary, but also included an option to complete the questionnaire online. A Freephone helpline and email was available for respondents to opt out, ask questions about the survey, enable them to complete their questionnaire over the phone and provide access to a translation and interpreting facility for those whose first language was not English.

Scoring methodology

Only unadjusted scores are presented in this report as no comparisons are made to scores nationally (where it would be more appropriate to use adjusted scores).

Fifty-two questions from the questionnaire are scored as these questions relate directly to patient experience. For all but one question (Q61), scores are presented as the percentage of positive responses out of all scored responses. For Q61, respondents rate their overall care on a scale of 0 to 10, of which the average was calculated for this question's presented score. The percentages in this report have been rounded to the nearest percentage point. Therefore, in some cases the figures do not appear to add up to 100%.

Statistical significance

In the reporting of 2020 results, appropriate statistical tests have been undertaken to identify unadjusted scores for which the change over time is 'statistically significant'. Forty-eight scored questions in 2020 have been compared with those of 2019 and a statistically significant change between the two years has been reported where identified.

For the scored questions that are comparable beyond 2019, statistically significant change over the multiple years has also been reported where identified. A statistically significant difference means that the change in the result is very unlikely to have occurred by sampling variation.

Suppression

Question-level suppression

For 2020 scores where the base size per question is <11, the score will be suppressed and replaced with an asterisk (*).

For 2016 to 2019 scores where the base size per question is <21, the score will be suppressed and replaced with an asterisk (*).

The base size does not include non-scored response options.

Double suppression

If any group within a particular sub-group breakdown (such as the tumour group breakdown) has <11 respondents, then the figure for this particular group is suppressed and replaced with an asterisk (*). If there is only one group within the sub-group breakdown that has <11 respondents, and is therefore suppressed, the group with the next lowest number of respondents is also suppressed and replaced with an asterisk (*) (regardless if it is greater than or less than 11).

Understanding the results

This report shows how this Trust scored for each question in the survey compared with previous year's results. It is aimed at helping individual Trusts to understand their performance and identify areas for local improvement. Below is a description of the type of results presented within this report and how to understand them.

Comparability tables

The comparability tables show the 2019 and 2020 unadjusted scores for this Trust for each scored question. If there is a significant change from 2019 and 2020 or overall from 2016 to 2020, an arrow will be presented for the direction of change.

Sub-group breakdowns

Unadjusted scores are shown for tumour type, sex, age and ethnicity breakdowns. Unadjusted scores for the same sub-group across different Trusts may not be comparable, as they do not account for the impact that differing patient populations might have on results.

Tumour type tables

The tumour type tables show the unadjusted scores for each scored question for each of the 13 tumour groups. Central nervous system is abbreviated as 'CNS' and lower gastrointestinal tract is abbreviated as 'LGT' throughout this report.

Age group tables

The age group tables show the unadjusted scores for each scored question for each of the seven age groups.

Sex and ethnicity tables

The sex and ethnicity tables show the unadjusted scores for male and female and for six ethnicity groups.

Year on year charts

The year on year charts show five columns representing the unadjusted scores of the last five years (2016, 2017, 2018, 2019 and 2020) for each scored question.

Notes on specific questions

The questionnaire for the 2020 survey is based on the 2019 CPES questionnaire. There were some minor amendments made to reflect current practice, to ensure that survey respondents could select the answers that were most relevant to them. As part of this process, four scored questions were amended (Q3, Q10, Q32 and Q51) and two non-scored questions (Q1 and Q8) were amended. These questions are no longer comparable with previous historical data.

Further information

This research was carried out in accordance with the international standard for organisations conducting social research (accreditation to ISO20252:2012; certificate number GB08/74322). The 2020 survey data has been produced and published in line with the Code of Practice for Official Statistics.

For more information on the methodology, please see the Technical Document. It can be viewed along with the 2020 questionnaire and survey guidance on the website at www.ncpes.co.uk. For all other outputs at Trust level, please see the Excel tables and dashboards at www.ncpes.co.uk.

Response Rate

Overall Response Rate

462 patients responded out of a total of 685 patients, resulting in a response rate of 67%.

| | Sample Size | Adjusted Sample | Completed | Response Rate |
|------------|-------------|-----------------|-----------|---------------|
| Trust | 709 | 685 | 462 | 67% |
| All Trusts | 34,061 | 33,266 | 19,610 | 59% |

Respondents by Survey Type

| | Number of Respondents |
|---------------------|-----------------------|
| Online | 62 |
| Paper | 400 |
| Phone | 0 |
| Translation Service | 0 |

Respondents by Tumour Group

| | Number of Respondents |
|------------------|-----------------------|
| Brain / CNS | 0 |
| Breast | 112 |
| Colorectal / LGT | 64 |
| Gynaecological | 13 |
| Haematological | 95 |
| Head and Neck | 10 |
| Lung | 21 |
| Prostate | 7 |
| Sarcoma | 2 |
| Skin | 13 |
| Upper Gastro | 18 |
| Urological | 45 |
| Other | 62 |

Respondents by Age and Sex

Respondents year of birth has been used to determine age. This information has been amalgamated into 7 age bands. The age and sex distribution for the Trust was as follows:

| | Age 16-24 | Age 25-34 | Age 35-44 | Age 45-54 | Age 55-64 | Age 65-74 | Age 75+ | Total |
|-----------|-----------|-----------|-----------|-----------|-----------|-----------|---------|-------|
| Male | 0 | 1 | 3 | 8 | 26 | 81 | 70 | 189 |
| Female | 0 | 1 | 17 | 44 | 60 | 78 | 63 | 263 |
| Not given | 0 | 0 | 0 | 0 | 2 | 6 | 2 | 10 |
| Total | 0 | 2 | 20 | 52 | 88 | 165 | 135 | 462 |

Respondents by Ethnicity

| | Number of Respondents |
|---|-----------------------|
| White | |
| English / Welsh / Scottish / Northern Irish / British | 431 |
| Irish | 2 |
| Gypsy or Irish Traveller | 0 |
| Any other White background | 8 |
| Mixed / Multiple Ethnic Groups | |
| White and Black Caribbean | 0 |
| White and Black African | 0 |
| White and Asian | 3 |
| Any other Mixed / multiple ethnic background | 1 |
| Asian or Asian British | |
| Indian | 2 |
| Pakistani | 0 |
| Bangladeshi | 0 |
| Chinese | 2 |
| Any other Asian background | 0 |
| Black / African / Caribbean / Black British | |
| African | 0 |
| Caribbean | 0 |
| Any other Black / African / Caribbean background | 0 |
| Other Ethnic Group | |
| Arab | 0 |
| Any other ethnic background | 0 |
| Not given | |
| Not given | 13 |

Comparability Tables

* Indicates where a score has been suppressed because there are less than 11 responses (2020) or less than 21 responses (2019).

** No score available for 2019.
