

# **Cancer Patient Experience Survey**

2021 Results

**Barts Health NHS Trust**

Published July 2022

## Executive Summary

Barts Health NHS Trust has no scores above expected range

### Questions Below Expected Range

	Case Mix Adjusted Scores			National Score
	2021 Score	Lower Expected Range	Upper Expected Range	
Q5. Patient received all the information needed about the diagnostic test in advance	<b>90%</b>	90%	95%	<b>93%</b>
Q6. Diagnostic test staff appeared to completely have all the information they needed about the patient	<b>80%</b>	81%	87%	<b>84%</b>
Q7. Patient felt the length of time waiting for diagnostic test results was about right	<b>78%</b>	79%	85%	<b>82%</b>
Q16. Patient was told they could go back later for more information about their diagnosis	<b>78%</b>	79%	87%	<b>83%</b>
Q27. Staff provided the patient with relevant information on available support	<b>87%</b>	87%	92%	<b>90%</b>
Q32. Patient's family, or someone close, was definitely able to talk to a member of the team looking after the patient in hospital	<b>53%</b>	54%	67%	<b>61%</b>
Q35. Patient was always able to discuss worries and fears with hospital staff	<b>61%</b>	61%	72%	<b>67%</b>
Q36. Hospital staff always did everything they could to help the patient control pain	<b>80%</b>	82%	90%	<b>86%</b>
Q37. Patient was always treated with respect and dignity while in hospital	<b>85%</b>	86%	93%	<b>89%</b>
Q39. Patient was always able to discuss worries and fears with hospital staff while being treated as an outpatient or day case	<b>74%</b>	74%	82%	<b>78%</b>
Q43. Patient felt the length of waiting time at clinic and day unit for cancer treatment was about right	<b>67%</b>	70%	88%	<b>79%</b>
Q45. Patient was always offered practical advice on dealing with any immediate side effects from treatment	<b>63%</b>	66%	74%	<b>70%</b>
Q50. During treatment, the patient definitely got enough care and support at home from community or voluntary services	<b>44%</b>	46%	57%	<b>51%</b>
Q57. Administration of care was very good or good	<b>80%</b>	85%	91%	<b>88%</b>
Q59. Patient's average rating of care scored from very poor to very good	<b>8.7</b>	8.7	9.1	<b>8.9</b>

## Introduction

The National Cancer Patient Experience Survey 2021 is the 11th iteration of the survey first undertaken in 2010. It has been designed to monitor progress on cancer care; to provide information to drive local quality improvements; to assist commissioners and providers of cancer care; and to inform the work of the various charities and stakeholder groups supporting cancer patients.

The survey was overseen by a national Cancer Patient Experience Advisory Group. This Advisory Group set the principles and objectives of the survey programme and guided questionnaire development. The survey was commissioned and managed by NHS England. The survey provider, Picker, is responsible for designing, running and analysing the survey.

The 2021 survey involved 134 NHS Trusts. Out of 107,412 people, 59,352 people responded to the survey, yielding a response rate of 55%.

## Methodology

### Eligibility, fieldwork and survey methods

The sample for the survey included all adult (aged 16 and over) NHS patients, with a confirmed primary diagnosis of cancer, discharged from an NHS Trust after an inpatient episode or day case attendance for cancer related treatment in the months of April, May and June 2021. The fieldwork for the survey was undertaken between October 2021 and February 2022.

As in the previous six years, the survey used a mixed mode methodology. Questionnaires were sent by post, with two reminders where necessary, but also included an option to complete the questionnaire online. A Freephone helpline and email was available for respondents to opt out, ask questions about the survey, enable them to complete their questionnaire over the phone and provide access to a translation and interpreting facility for those whose first language was not English.

### Note on question comparability

The questionnaire was redeveloped for the 2021 National Cancer Patient Experience Survey. Due to the significant changes made to the questionnaire no trend data or year on year comparisons are presented in results, and comparisons to previous years' results should not be made.

### Case-mix adjustment

Both unadjusted and adjusted scores are presented in this report. Case-mix adjusted scores allows us to account for the impact that differing patient populations might have on results. By using the case-mix adjusted estimates we can obtain a greater understanding of how a Trust is performing given their patient population. The factors taken into account in this case-mix adjustment are gender, age, ethnic group, deprivation, and cancer type.

Unadjusted data should be used to see the actual responses from patients relating to the Trust. Case-mix adjusted data, together with expected ranges, should be used to understand whether the results are significantly higher or lower than national results taking account of the patient mix.

### Scoring methodology

Sixty-one questions from the questionnaire are scored as these questions relate directly to patient experience. For all but one question (Q59), the score shows the percentage of respondents who gave the most favourable response to a question. For Q59, respondents rate their overall care on a scale of 0 to 10, of which the average was calculated for this question's presented score. The percentages in this report have been rounded to the nearest percentage point. Therefore, in some cases the figures do not appear to add up to 100%.

## Suppression

### Question-level suppression

For scores where the base size per question is <11, the score will be suppressed and replaced with an asterisk (\*). The base size does not include non-scored response options.

### Double suppression

If any group within a particular sub-group breakdown (such as the tumour group breakdown) has <11 respondents, then the figure for this particular group is suppressed and replaced with an asterisk (\*).

If there is only one group within the sub-group breakdown that has <11 respondents, and is therefore suppressed, the group with the next lowest number of respondents is also suppressed and replaced with an asterisk (\*) (regardless if it is greater than or less than 11).

### Additional suppression

Additional suppression happens if only **one** Trust has a score suppressed. If this happens, we will suppress another Trust's results (both the Trust level and subgroup results for the question) based on the next lowest number of respondents for the score. We do this so that the national score cannot be used to work out the score for the individual Trust.

The same rule applies to groups in each subgroup breakdown. For example, if only **one** Trust has the 85+ age group suppressed for Q25 we will need to suppress another Trust's results for the 85+ age group on Q25. This suppression is based on the 85+ age group with the next lowest number of respondents for Q25.

## Understanding the results

This report shows how this Trust scored for each question in the survey compared with national results. It is aimed at helping individual Trusts to understand their performance and identify areas for local improvement. Below is a description of the type of results presented within this report and how to understand them.

### Expected range charts

The expected range charts in this report show a bar with the lowest and highest score received for each question nationally. Within this bar, an expected range is given (in grey) and a black diamond represents the actual score for this Trust.

Trusts whose score is above the upper limit of the expected range (in the dark blue) are positive outliers, with a score statistically significantly higher than the national mean. This indicates that the Trust performs better than what Trusts of the same size and demographics are expected to perform. The opposite is true if the score is below the lower limit of the expected range (in the light blue); these are negative outliers. For scores within the expected range (in the grey), the score is what we would expect given the Trust's size and demographics.

### Comparability tables

The comparability tables show the 2021 unadjusted scores for this Trust for each scored question. The adjusted 2021 score will also be presented for each scored question along with the lower and upper expected range and national score. Scores above the upper limit of the expected range will be highlighted dark blue, scores below the lower limit of the expected range will be highlighted light blue, and scores within the lower and upper limit of the expected ranges will be highlighted grey.

### Sub-group breakdowns

Unadjusted scores are shown for tumour type, gender, age, IMD quintile and ethnicity breakdowns. Unadjusted scores for the same sub-group across different Trusts may not be comparable, as they do not account for the impact that differing patient populations might have on results.

### Tumour type tables

The tumour type tables show the unadjusted scores for each scored question for each of the 13 tumour groups. Central nervous system is abbreviated as 'CNS' and lower gastrointestinal tract is abbreviated as 'LGT' throughout this report.

### Age group tables

The age group tables show the unadjusted scores for each scored question for each of the eight age groups.

### Gender tables

The gender tables show the unadjusted scores for the following groups male; female; non-binary; prefer to self-describe; and prefer not to say.

### Ethnicity tables

The ethnicity tables show the unadjusted scores for six ethnicity groups.

### **IMD quintile tables**

The IMD quintile tables show the unadjusted scores for five quintiles based on relative disadvantage, with quintile 1 being the most deprived and quintile 5 being the least deprived.

### **Further information**

This research was carried out in accordance with the international standard for organisations conducting social research (accreditation to ISO20252:2012; certificate number GB08/74322). The 2021 survey data has been produced and published in line with the Code of Practice for Official Statistics.

For more information on the methodology, please see the Technical Document. It can be viewed along with the 2021 questionnaire and survey guidance on the website at [www.ncpes.co.uk](http://www.ncpes.co.uk). For all other outputs at Trust level, please see the Excel tables and dashboards at [www.ncpes.co.uk](http://www.ncpes.co.uk).

## Response Rate

### Overall Response Rate

628 patients responded out of a total of 1,526 patients, resulting in a response rate of 41%.

	Sample Size	Adjusted Sample	Completed	Response Rate
Overall response rate	1,638	1,526	628	41%
National	113,516	107,412	59,352	55%

### Respondents by Survey Type

	Number of Respondents
Paper	486
Online	142
Phone	0
Translation Service	0
<b>Total</b>	<b>628</b>

### Respondents by Tumour Group

	Number of Respondents
Brain / CNS	3
Breast	168
Colorectal / LGT	80
Gynaecological	32
Haematological	90
Head and Neck	19
Lung	57
Prostate	18
Sarcoma	1
Skin	22
Upper Gastro	24
Urological	39
Other	75
<b>Total</b>	<b>628</b>

## Respondents by Age and Gender

Respondents year of birth has been used to determine age. This information has been amalgamated into 8 age bands. The age and gender distribution for the Trust was as follows:

	Age 16-24	Age 25-34	Age 35-44	Age 45-54	Age 55-64	Age 65-74	Age 75-84	Age 85+	Total
Female	1	9	42	87	79	87	46	6	357
Male	0	4	6	24	53	93	43	15	238
Non-binary	0	0	0	0	0	1	0	0	1
Prefer to self-describe	0	0	0	0	0	0	0	1	1
Prefer not to say	0	0	1	0	0	0	0	0	1
Not given	0	0	0	2	8	8	11	1	30
<b>Total</b>	<b>1</b>	<b>13</b>	<b>49</b>	<b>113</b>	<b>140</b>	<b>189</b>	<b>100</b>	<b>23</b>	<b>628</b>

## Respondents by Ethnicity

	Number of Respondents
<b>White</b>	
English / Welsh / Scottish / Northern Irish / British	341
Irish	18
Gypsy or Irish Traveller	0
Any other White background	47
<b>Mixed / Multiple Ethnic Groups</b>
