2021 Results

Harrogate and District NHS Foundation Trust

Published July 2022

Executive Summary

Questions Above Expected Range

	Case Mix Adjusted Scores			National Score
	2021 Score	Lower Expected Range	Upper Expected Range	
Q3. Referral for diagnosis was explained in a way the patient could completely understand	72%	58%	70%	64%
Q5. Patient received all the information needed about the diagnostic test in advance	96%	89%	96%	93%
Q6. Diagnostic test staff appeared to completely have all the information they needed about the patient	91%	79%	88%	84%
Q7. Patient felt the length of time waiting for diagnostic test results was about right	92%	77%	87%	82%
Q8. Diagnostic test results were explained in a way the patient could completely understand	85%	74%	84%	79%
Q13. Patient was definitely told sensitively that they had cancer	83%	68%	79%	73%
Q14. Cancer diagnosis explained in a way the patient could completely understand	83%	72%	81%	76%
Q17. Patient had a main point of contact within the care team	97%	88%	95%	92%
Q18. Patient found it very or quite easy to contact their main contact person	90%	80%	90%	85%
Q20. Treatment options were explained in a way the patient could completely understand	87%	78%	87%	82%
Q21. Patient was definitely involved as much as they wanted to be in decisions about their treatment	86%	74%	84%	79%
Q22. Family and/or carers were definitely involved as much as the patient wanted them to be in decisions about treatment options	85%	69%	81%	75%
Q24. Patient was definitely able to have a discussion about their needs or concerns prior to treatment	86%	66%	77%	72%
Q25. A member of their care team helped the patient create a care plan to address any needs or concerns	98%	89%	97%	93%
Q27. Staff provided the patient with relevant information on available support	97%	86%	93%	90%
Q28. Patient definitely got the right level of support for their overall health and well being from hospital staff	83%	71%	81%	76%
Q29. Patient was offered information about how to get financial help or benefits	95%	61%	78%	69%
Q39. Patient was always able to discuss worries and fears with hospital staff while being treated as an outpatient or day case	86%	73%	84%	78%
Q41_1. Beforehand patient completely had enough understandable information about surgery	95%	84%	95%	89%
Q42_1. Patient completely had enough understandable information about progress with surgery	93%	79%	91%	85%
Q42_2. Patient completely had enough understandable information about progress with chemotherapy	89%	72%	85%	79%
Q42_4. Patient completely had enough understandable information about progress with hormone therapy	84%	62%	82%	72%
Q43. Patient felt the length of waiting time at clinic and day unit for cancer treatment was about right	91%	70%	88%	79%
Q45. Patient was always offered practical advice on dealing with any immediate side effects from treatment	78%	64%	76%	70%
Q46. Patient was given information that they could access about support in dealing with immediate side effects from treatment	94%	81%	90%	86%
Q47. Patient felt possible long-term side effects were definitely explained in a way they could understand in advance of their treatment	69%	53%	66%	60%
Q48. Patient was definitely able to discuss options for managing the impact of any long-term side effects	65%	47%	60%	54%
Q49. Care team gave family, or someone close, all the information needed to help care for the patient at home	68%	48%	63%	55%
Q55. Patient was given enough information about the possibility and signs of cancer coming back or spreading	75%	56%	69%	63%
Q56. The whole care team worked well together	96%	87%	94%	91%
Q57. Administration of care was very good or good	96%	84%	92%	88%

Q59. Patient's average rating of care scored from very poor to very good	9.2	8.7	9.1	8.9

Harrogate and District NHS Foundation Trust has no scores below expected range

Introduction

The National Cancer Patient Experience Survey 2021 is the 11th iteration of the survey first undertaken in 2010. It has been designed to monitor progress on cancer care; to provide information to drive local quality improvements; to assist commissioners and providers of cancer care; and to inform the work of the various charities and stakeholder groups supporting cancer patients.

The survey was overseen by a national Cancer Patient Experience Advisory Group. This Advisory Group set the principles and objectives of the survey programme and guided questionnaire development. The survey was commissioned and managed by NHS England. The survey provider, Picker, is responsible for designing, running and analysing the survey.

The 2021 survey involved 134 NHS Trusts. Out of 107,412 people, 59,352 people responded to the survey, yielding a response rate of 55%.

Methodology

Eligibility, fieldwork and survey methods

The sample for the survey included all adult (aged 16 and over) NHS patients, with a confirmed primary diagnosis of cancer, discharged from an NHS Trust after an inpatient episode or day case attendance for cancer related treatment in the months of April, May and June 2021. The fieldwork for the survey was undertaken between October 2021 and February 2022.

As in the previous six years, the survey used a mixed mode methodology. Questionnaires were sent by post, with two reminders where necessary, but also included an option to complete the questionnaire online. A Freephone helpline and email was available for respondents to opt out, ask questions about the survey, enable them to complete their questionnaire over the phone and provide access to a translation and interpreting facility for those whose first language was not English.

Note on question comparability

The questionnaire was redeveloped for the 2021 National Cancer Patient Experience Survey. Due to the significant changes made to the questionnaire no trend data or year on year comparisons are presented in results, and comparisons to previous years' results should not be made.

Case-mix adjustment

Both unadjusted and adjusted scores are presented in this report. Case-mix adjusted scores allows us to account for the impact that differing patient populations might have on results. By using the case-mix adjusted estimates we can obtain a greater understanding of how a Trust is performing given their patient population. The factors taken into account in this case-mix adjustment are gender, age, ethnic group, deprivation, and cancer type.

Unadjusted data should be used to see the actual responses from patients relating to the Trust. Case-mix adjusted data, together with expected ranges, should be used to understand whether the results are significantly higher or lower than national results taking account of the patient mix.

Scoring methodology

Sixty-one questions from the questionnaire are scored as these questions relate directly to patient experience. For all but one question (Q59), the score shows the percentage of respondents who gave the most favourable response to a question. For Q59, respondents rate their overall care on a scale of 0 to 10, of which the average was calculated for this question's presented score. The percentages in this report have been rounded to the nearest percentage point. Therefore, in some cases the figures do not appear to add up to 100%.

Suppression

Question-level suppression

For scores where the base size per question is <11, the score will be suppressed and replaced with an asterisk (*). The base size does not include non-scored response options.

Double suppression

If any group within a particular sub-group breakdown (such as the tumour group breakdown) has <11 respondents, then the figure for this particular group is suppressed and replaced with an asterisk (*).

If there is only one group within the sub-group breakdown that has <11 respondents, and is therefore suppressed, the group with the next lowest number of respondents is also suppressed and replaced with an asterisk (*) (regardless if it is greater than or less than 11).

Additional suppression

Additional suppression happens if only **one** Trust has a score suppressed. If this happens, we will suppress another Trust's results (both the Trust level and subgroup results for the question) based on the next lowest number of respondents for the score. We do this so that the national score cannot be used to work out the score for the individual Trust.

The same rule applies to groups in each subgroup breakdown. For example, if only **one** Trust has the 85+ age group suppressed for Q25 we will need to suppress another Trust's results for the 85+ age group on Q25. This suppression is based on the 85+ age group with the next lowest number of respondents for Q25.

Understanding the results

This report shows how this Trust scored for each question in the survey compared with national results. It is aimed at helping individual Trusts to understand their performance and identify areas for local improvement. Below is a description of the type of results presented within this report and how to understand them.

Expected range charts

The expected range charts in this report show a bar with the lowest and highest score received for each question nationally. Within this bar, an expected range is given (in grey) and a black diamond represents the actual score for this Trust.

Trusts whose score is above the upper limit of the expected range (in the dark blue) are positive outliers, with a score statistically significantly higher than the national mean. This indicates that the Trust performs better than what Trusts of the same size and demographics are expected to perform. The opposite is true if the score is below the lower limit of the expected range (in the light blue); these are negative outliers. For scores within the expected range (in the grey), the score is what we would expect given the Trust's size and demographics.

Comparability tables

The comparability tables show the 2021 unadjusted scores for this Trust for each scored question. The adjusted 2021 score will also be presented for each scored question along with the lower and upper expected range and national score. Scores above the upper limit of the expected range will be highlighted dark blue, scores below the lower limit of the expected range will be highlighted light blue, and scores within the lower and upper limit of the expected ranges will be highlighted grey.

Sub-group breakdowns

Unadjusted scores are shown for tumour type, gender, age, IMD quintile and ethnicity breakdowns. Unadjusted scores for the same sub-group across different Trusts may not be comparable, as they do not account for the impact that differing patient populations might have on results.

Tumour type tables

The tumour type tables show the unadjusted scores for each scored question for each of the 13 tumour groups. Central nervous system is abbreviated as 'CNS' and lower gastrointestinal tract is abbreviated as 'LGT' throughout this report.

Age group tables

The age group tables show the unadjusted scores for each scored question for each of the eight age groups.

Gender tables

The gender tables show the unadjusted scores for the following groups male; female; non-binary; prefer to self-describe; and prefer not to say.

Ethnicity tables

The ethnicity tables show the unadjusted scores for six ethnicity groups.

IMD quintile tables

The IMD quintile tables show the unadjusted scores for five quintiles based on relative disadvantage, with quintile 1 being the most deprived and quintile 5 being the least deprived.

Further information

This research was carried out in accordance with the international standard for organisations conducting social research (accreditation to ISO20252:2012; certificate number GB08/74322). The 2021 survey data has been produced and published in line with the Code of Practice for Official Statistics.

For more information on the methodology, please see the Technical Document. It can be viewed along with the 2021 questionnaire and survey guidance on the website at www.ncpes.co.uk. For all other outputs at Trust level, please see the Excel tables and dashboards at www.ncpes.co.uk.

Response Rate

Overall Response Rate

307 patients responded out of a total of 485 patients, resulting in a response rate of 63%.

	Sample Size	Adjusted Sample	Completed	Response Rate
Overall response rate	517	485	307	63%
National	113,516	107,412	59,352	55%
