

National Cancer Patient Experience Survey 2022

53% response rate

61,268 people responded

59%

said the <u>possible long-term side effects</u>, including the impact on their day-to-day activities, were definitely understood

62.4%

said they were given enough <u>information</u> <u>about the possibility of the cancer coming</u> <u>back or spreading</u>, such as what to look out for and what to do if they had concerns

00 000 000 8.88

On a scale of 0 (very poor) to 10 (very good), the average rating of care was 8.88

86.7%

said the <u>administration</u> <u>of their care</u> was very good or good

91.5%

said they had a <u>main contact</u> <u>person</u> who would support them through treatment within the team looking after them

71.1%

said that before their treatment started, they had a <u>discussion about</u> <u>their needs or</u> <u>concerns</u> with a member of the team looking after them

44.7%

75.9%

first told they had cancer

said they got the right amount of <u>support from</u> <u>staff at their GP practice</u> during treatment

said they had been given the option

of having a family member, carer or friend with them when they were

65.4%

of people who had contacted their GP practice said that the <u>referral for diagnosis</u> was easy to understand

78.6%

who had an overnight stay said they had <u>confidence</u> <u>and trust in all of the team</u> looking after them
