Questions above expected range

North East London Cancer Alliance has no scores above expected range.

Executive summary

Questions below expected range

	Case mix adjusted scores			England score
	2024 score	Lower expected range	Upper expected range	
Q05. Patient received all the information needed about the diagnostic test in advance	**90%**	91%	95%	**93%**
Q06. Diagnostic test staff appeared to completely have all the information they needed about the patient	**80%**	81%	86%	**83%**
Q08. Diagnostic test results were explained in a way the patient could completely understand	**75%**	76%	82%	**79%**
Q09. Enough privacy was always given to the patient when receiving diagnostic test results	**93%**	93%	96%	**95%**
Q16. Patient was told they could go back later for more information about their diagnosis	**81%**	81%	89%	**85%**
Q18. Patient found it very or quite easy to contact their main contact person	**80%**	81%	88%	**85%**
Q19. Patient found advice from main contact person was very or quite helpful	**93%**	94%	97%	**96%**
Q23. Patient could get further advice from a different healthcare professional before making decisions about their treatment options	**52%**	53%	62%	**58%**
Q24. Patient was definitely able to have a discussion about their needs or concerns prior to treatment	**68%**	69%	77%	**73%**
Q26. Care team reviewed the patient's care plan with them to ensure it was up to date	**98%**	98%	100%	**99%**
Q35. Patient was always able to discuss worries and fears with hospital staff	**61%**	61%	70%	**66%**
Q39. Patient was always able to discuss worries and fears with hospital staff while being treated as an outpatient or day case	**76%**	76%	84%	**80%**
Q42_1. Patient completely had enough understandable information about their response to surgery	**82%**	84%	89%	**87%**
Q43. Patient felt the length of waiting time at clinic and day unit for cancer treatment was about right	**70%**	74%	85%	**79%**
Q46. Patient was given information that they could access about support in dealing with immediate side effects from treatment	**84%**	85%	91%	**88%**
Q48. Patient was definitely able to discuss options for managing the impact of any long-term side effects	**50%**	51%	61%	**56%**
Q51. Patient definitely received the right amount of support from their GP practice during treatment	**42%**	43%	53%	**48%**
Q54. The right amount of information and support was offered to the patient between final treatment and the follow up appointment	**76%**	76%	85%	**81%**
Q59. Patient's average rating of care scored from very poor to very good	**8.8**	8.8	9.1	**8.9**

Introduction

The National Cancer Patient Experience Survey 2024 is the fourteenth iteration of the survey first undertaken in 2010. It has been designed to monitor progress on cancer care; to provide information to drive local quality improvements; to assist commissioners and providers of cancer care; and to inform the work of the various charities and stakeholder groups supporting cancer patients.

The survey was undertaken by Picker on behalf of NHS England and it was overseen by a National Cancer Patient Experience Advisory Group. This Advisory Group set the principles and objectives of the survey programme and guided questionnaire development. The survey was commissioned and managed by NHS England. The survey provider, Picker, is responsible for designing, running and analysing the survey.

The 2024 survey involved 131 NHS trusts. Out of 127,021 people, 64,055 people responded to the survey, yielding a response rate of 50%.

Methodology

Eligibility, fieldwork and survey methods

The sample for the survey included all adult (aged 16 and over) NHS patients, with a confirmed primary diagnosis of cancer, discharged from an NHS trust after an inpatient episode or day case attendance for cancer related treatment in the months of April, May and June 2024. The fieldwork for the survey was undertaken between November 2024 and February 2025.

As in the previous nine years, the survey used a mixed mode methodology. Questionnaires were sent by post, with two reminders where necessary, but also included an option to complete the questionnaire online. A Freephone helpline and email was available for respondents to opt out, ask questions about the survey, enable them to complete their questionnaire over the phone and provide access to a translation and interpreting facility for those whose first language was not English.

Note on question comparability

The questionnaire was redeveloped for the 2021 National Cancer Patient Experience Survey. Year on year comparisons between 2021, 2022, 2023 and 2024 are included in this report for most questions. There were three changes to the questionnaire over the last two years:

- In 2023 the question text for Q23 and Q42 were amended. These questions are no longer deemed comparable to 2021 and 2022. Data is only comparable for 2023 and 2024.

- In 2023 the long-term condition question (Q67) was amended to include "Autism or autism spectrum condition" as a response option. And the "Neurological condition" answer option was updated to include an example condition changing it to "Neurological condition, such as epilepsy". These changes see the answer option "Neurological condition, such as epilepsy" as no longer being deemed comparable to 2021 and 2022. Data is only comparable for 2023 and 2024.

- In 2023 the ethnic group question (Q71) was amended to include "Roma" as an answer option. The ethnic group question is still deemed comparable to 2021 and 2022. Data for the answer option is only available for 2023 and 2024.

How alliance results are derived

Alliance and ICB results are not derived by mapping trust results. Alliance and ICB results are derived using the postcode of each patient. Alliance and ICB results therefore reflect the experience of people referred from within the geographical footprint. This mapping is achieved using lookup files released by the Office for National Statistics. Alliance and ICB results are therefore presented at the 'England' level and exclude other UK postcodes. Please note that due to updates in Cancer Alliance boundaries, historical data has been recalculated for certain alliances.

Case mix adjustment

Both unadjusted and adjusted scores are presented in this report. Case mix adjusted scores allow us to account for the impact that differing patient populations might have on results. By using the case mix adjusted estimates we can obtain a greater understanding of how an alliance is performing given their patient population. The factors taken into account in this case mix adjustment are 'Which of the following best describes you?', age, ethnicity, deprivation, and cancer type.

Unadjusted data should be used to see the actual responses from patients relating to the alliance. Case mix adjusted data, together with expected ranges, should be used to understand whether the results are significantly higher or lower than national results taking account of the patient mix.

Scoring methodology

Sixty-one questions from the questionnaire are scored as these questions relate directly to patient experience. For all but one question (Q59), the score shows the percentage of respondents who gave the most favourable response to a question. For Q59, respondents rate their overall care on a scale of 0 to 10, of which the average was calculated for this question's score. The percentages in this report have been rounded to the nearest percentage point. Therefore, in some cases the figures do not appear to add up to 100%.

In 2022, following a review of the scoring methodology, a change was made to the scoring of Q12 such that the response option "No, I was told by letter or email" is no longer considered neutral and is now scored as negative.

The full scoring for all questions at an alliance level is available in the Cancer Alliance Excel tables available at www.ncpes.co.uk. Excel tables are also available at a national, trust and ICB level.

Statistical significance

In the reporting of 2024 results, appropriate statistical tests have been undertaken to identify unadjusted scores for which the change over time is 'statistically significant'. A statistically significant difference means that the change in the result is very unlikely to have occurred by chance.

Suppression

Data is suppressed for two reasons: to ensure unreliable results based on very small numbers of respondents are not released, and to prevent individuals being identifiable in the data.

In cases where a result is based on fewer than 10 responses, the result has been suppressed. For example, where fewer than 10 people answered a question from a particular trust, the results are not shown for that question for that alliance.

For alliances with an eligible population of 1,000 or fewer, data relating to the respondent and their condition has been suppressed where 5 people or fewer were in a particular category. In instances where only one has been suppressed, the next lowest category has been suppressed to prevent back calculation from the total number of responses.

Additional suppression

Additional suppression happens if only **one** alliance has a score suppressed. If this happens, we will suppress another alliance's results (both the alliance level and subgroup results for the question) based on the next lowest number of respondents for the score. We do this so that the national score cannot be used to work out the score for the individual alliance.

The same rule applies to groups in each subgroup breakdown. For example, if only one alliance has the 85+ age group suppressed for Q25 we will need to suppress another alliance's results for the 85+ age group on Q25. This suppression is based on the 85+ age group with the next lowest number of respondents for Q25.

Understanding the results

This report shows how this alliance scored for each question in the survey compared with England results. It is aimed at helping individual alliances to understand their performance and identify areas for local improvement. Below is a description of the type of results presented within this report and how to understand them.

Expected range charts

The expected range charts in this report show a bar with the lowest and highest score received for each question nationally. Within this bar, an expected range is given (within the grey bar) and a black diamond represents the actual score for this alliance.

Alliances whose score is above the upper limit of the expected range (in the dark blue) are positive outliers, with a score statistically significantly higher than the national mean. This indicates that the alliance performs better than what alliances of the same size and demographics are expected to perform. The opposite is true if the score is below the lower limit of the expected range (in the light blue); these are negative outliers. For scores within the expected range (in the grey), the score is what we would expect given the alliance's size and demographics.

Comparability tables

The comparability tables show the 2023 and 2024 unadjusted scores for this trust for each scored question. The Change 2023-2024 and Change overall columns show whether the scores show a statistically significant variation between years. This is shown between 2023-2024 and as an overall between 2021-2024. An upwards arrow indicates a statistically significant increase, a downwards arrow indicates a statistically significant decrease, and no arrow indicates no statistically significant change.

The adjusted 2024 score will also be presented for each scored question along with the lower and upper expected range and national score. Scores above the upper limit of the expected range will be highlighted dark blue, scores below the lower limit of the expected range will be highlighted light blue, and scores within the lower and upper limit of the expected ranges will be highlighted grey.

Subgroup breakdowns

Unadjusted scores are shown for tumour group, 'Which of the following best describes you?', age, IMD quintile, long-term condition status, number of long-term conditions and ethnicity breakdowns. Unadjusted scores for the same subgroup across different alliance may not be comparable, as they do not account for the impact that differing patient populations might have on results.

Tumour group tables

The tumour group tables show the unadjusted scores for each scored question for each of the 13 tumour groups. Central nervous system is abbreviated as 'CNS' and lower gastrointestinal tract is abbreviated as 'LGT' throughout this report.

Age group tables

The age group tables show the unadjusted scores for each scored question for each of the eight age groups.

'Which of the following best describes you?'

These tables show the unadjusted scores for the following groups male; female; non-binary; prefer to self-describe; and prefer not to say.

Ethnicity tables

The ethnicity tables show the unadjusted scores for six ethnicity groups.

Long-term condition status tables

The long-term condition status tables show the unadjusted scores for two groups: those who indicate they have one or more long-term conditions and those who indicate that they have no long-term conditions.

Number of long-term conditions tables

The number of long-term conditions tables show the unadjusted scores for four groups: those who indicate they have one long-term condition, two long-term conditions, three or more long-term conditions, and those who indicate that they have no long-term conditions.

IMD quintile tables

The IMD quintile tables show the unadjusted scores for five quintiles based on relative disadvantage, with quintile 1 being the most deprived and quintile 5 being the least deprived.

Year on year charts

The year on year charts show four columns representing the unadjusted scores of the last four years (2021, 2022, 2023 and 2024) for each scored question.

Trust expected range summary

The number of scored questions that fell below, within and above the expected range for each trust within the alliance.

ICB expected range summary

The number of scored questions that fell below, within and above the expected range for each ICB within the alliance.

National level and England level data

In some cases (389 respondents in 2024), patients from outside England (from Wales, Scotland, Northern Ireland, the Channel Islands or the Isle of Man) are referred to English NHS trusts for treatment. These patients are described as 'Non-England' in the data.

Overall response rate at response rate sections shows national level counts and response rate. For cancer alliances and its comparison at comparability tables section, all data is presented at the England level.

Further information

This research was carried out in accordance with the international standard for organisations conducting market and social research (accreditation to ISO20252:2019; certificate number GB08/74322). Our statistical practice is regulated by the Office for Statistics Regulation (OSR). OSR sets the standards of trustworthiness, quality, and value in the Code of Practice for Statistics that all producers of official statistics should adhere to. You are welcome to contact us directly with any comments about how we meet these standards. Alternatively, you can contact OSR by emailing regulation@statistics.gov.uk or via the OSR website.

The 2024 questionnaire and survey guidance can be found on the website at www.ncpes.co.uk, and more information on the methodology in the Technical Document can be viewed on the website at www.ncpes.co.uk. For all other outputs at trust level, please see the Excel tables and dashboards at www.ncpes.co.uk.

Response rate

Overall response rate

1,164 patients responded out of a total of 3,087 patients, resulting in a response rate of 38%.

SUPPORT FROM YOUR GP PRACTICE

Q2. Patient only spoke to primary care professional once or twice before cancer diagnosis — 77%

Q3. Referral for diagnosis was explained in a way the patient could completely understand — 63%

DIAGNOSTIC TESTS

Q5. Patient received all the information needed about the diagnostic test in advance — 90%

Q6. Diagnostic test staff appeared to completely have all the information they needed about the patient — 80%

Q7. Patient felt the length of time waiting for diagnostic test results was about right — 76%

Q8. Diagnostic test results were explained in a way the patient could completely understand — 75%

Q9. Enough privacy was always given to the patient when receiving diagnostic test results — 93%

FINDING OUT THAT YOU HAD CANCER

Q12. Patient was told they could have a family member, carer or friend with them when told diagnosis — 81%

Q13. Patient was definitely told sensitively that they had cancer — 73%

Q14. Cancer diagnosis explained in a way the patient could completely understand — 76%

Q15. Patient was definitely told about their diagnosis in an appropriate place — 86%

Q16. Patient was told they could go back later for more information about their diagnosis — 81%

SUPPORT FROM A MAIN CONTACT PERSON

Q17. Patient had a main point of contact within the care team — 91%

Q18. Patient found it very or quite easy to contact their main contact person — 80%

Q19. Patient found advice from main contact person was very or quite helpful — 93%

DECIDING ON THE BEST TREATMENT

Q20. Treatment options were explained in a way the patient could completely understand — 81%

Q21. Patient was definitely involved as much as they wanted to be in decisions about their treatment — 77%

Q22. Family and / or carers were definitely involved as much as the patient wanted them to be in decisions about treatment options — 84%

Q23. Patient could get further advice from a different healthcare professional before making decisions about their treatment options — 52%

CARE PLANNING

Q24. Patient was definitely able to have a discussion about their needs or concerns prior to treatment — 68%

Q25. A member of their care team helped the patient create a care plan to address any needs or concerns — 93%

Q26. Care team reviewed the patient's care plan with them to ensure it was up to date — 98%

SUPPORT FROM HOSPITAL STAFF

Q27. Staff provided the patient with relevant information on available support — 93%

Q28. Patient definitely got the right level of support for their overall health and well being from hospital staff — 74%

Q29. Patient was offered information about how to get financial help or benefits — 72%

HOSPITAL CARE

Q31. Patient had confidence and trust in all of the team looking after them during their stay in hospital — 78%

Q32. Patient's family, or someone close, was definitely able to talk to a member of the team looking after the patient in hospital — 69%

Q33. Patient was always involved in decisions about their care and treatment whilst in hospital — 70%

Q34. Patient was always able to get help from ward staff when needed — 70%

Q35. Patient was always able to discuss worries and fears with hospital staff — 61%

Q36. Hospital staff always did everything they could to help the patient control pain — 81%

Q37. Patient was always treated with respect and dignity while in hospital — 85%

The left outer edge of the bars is the lowest score achieved of all alliances. The right outer edge of the bars is the highest score achieved of all alliances.

HOSPITAL CARE CONTINUED

Q38. Patient received easily understandable information about what they should or should not do after leaving hospital — 85%

Q39. Patient was always able to discuss worries and fears with hospital staff while being treated as an outpatient or day case — 76%

YOUR TREATMENT

Q41_1. Beforehand patient completely had enough understandable information about surgery — 89%

Q41_2. Beforehand patient completely had enough understandable information about chemotherapy — 87%

Q41_3. Beforehand patient completely had enough understandable information about radiotherapy — 91%

Q41_4. Beforehand patient completely had enough understandable information about hormone therapy — 81%

Q41_5. Beforehand patient completely had enough understandable information about immunotherapy — 87%

Q42_1. Patient completely had enough understandable information about their response to surgery — 82%

Q42_2. Patient completely had enough understandable information about their response to chemotherapy — 80%

Q42_3. Patient completely had enough understandable information about their response to radiotherapy — 85%

Q42_4. Patient completely had enough understandable information about their response to hormone therapy — 75%

Q42_5. Patient completely had enough understandable information about their response to immunotherapy — 80%

Q43. Patient felt the length of waiting time at clinic and day unit for cancer treatment was about right — 70%

IMMEDIATE AND LONG-TERM SIDE EFFECTS

Q44. Possible side effects from treatment were definitely explained in a way the patient could understand — 73%

Q45. Patient was always offered practical advice on dealing with any immediate side effects from treatment — 67%

Q46. Patient was given information that they could access about support in dealing with immediate side effects from treatment — 84%

Q47. Patient felt possible long-term side effects were definitely explained in a way they could understand in advance of their treatment — 59%

Q48. Patient was definitely able to discuss options for managing the impact of any long-term side effects — 50%

SUPPORT WHILE AT HOME

Q49. Care team gave family, or someone close, all the information needed to help care for the patient at home — 60%

Q50. During treatment, the patient definitely got enough care and support at home from community or voluntary services — 48%

CARE FROM YOUR GP PRACTICE

Q51. Patient definitely received the right amount of support from their GP practice during treatment — 42%

Q52. Patient has had a review of cancer care by GP practice — 23%

LIVING WITH AND BEYOND CANCER

Q53. After treatment, the patient definitely could get enough emotional support at home from community or voluntary services — 30%

Q54. The right amount of information and support was offered to the patient between final treatment and the follow up appointment — 76%

Q55. Patient was given enough information about the possibility and signs of cancer coming back or spreading — 60%

YOUR OVERALL NHS CARE

Q56. The whole care team worked well together — 89%

Q57. Administration of care was very good or good — 85%

Q58. Cancer research opportunities were discussed with patient — 50%

Q59. Patient's average rating of care scored from very poor to very good — 8.8
