**Questions below expected range** 

The Robert Jones and Agnes Hunt Orthopaedic Hospital NHS Foundation Trust has no scores below expected range.

#### Introduction

# National Cancer Patient Experience Survey 2024 The Robert Jones and Agnes Hunt Orthopaedic Hospital NHS Foundation Trust

The National Cancer Patient Experience Survey 2024 is the fourteenth iteration of the survey first undertaken in 2010. It has been designed to monitor progress on cancer care; to provide information to drive local quality improvements; to assist commissioners and providers of cancer care; and to inform the work of the various charities and stakeholder groups supporting cancer patients.

The survey was undertaken by Picker on behalf of NHS England and it was overseen by a National Cancer Patient Experience Advisory Group. This Advisory Group set the principles and objectives of the survey programme and guided questionnaire development. The survey was commissioned and managed by NHS England. The survey provider, Picker, is responsible for designing, running and analysing the survey.

The 2024 survey involved 131 NHS trusts. Out of 127,021 people, 64,055 people responded to the survey, yielding a response rate of 50%.

## **Methodology**

#### Eligibility, fieldwork and survey methods

The sample for the survey included all adult (aged 16 and over) NHS patients, with a confirmed primary diagnosis of cancer, discharged from an NHS trust after an inpatient episode or day case attendance for cancer related treatment in the months of April, May and June 2024. The fieldwork for the survey was undertaken between November 2024 and February 2025.

As in the previous nine years, the survey used a mixed mode methodology. Questionnaires were sent by post, with two reminders where necessary, but also included an option to complete the questionnaire online. A Freephone helpline and email was available for respondents to opt out, ask questions about the survey, enable them to complete their questionnaire over the phone and provide access to a translation and interpreting facility for those whose first language was not English.

#### Note on question comparability

The questionnaire was redeveloped for the 2021 National Cancer Patient Experience Survey. Year on year comparisons between 2021, 2022, 2023 and 2024 are included in this report for most questions. There were three changes to the questionnaire over the last two years:

- In 2023 the question text for Q23 and Q42 were amended. These questions are no longer deemed comparable to 2021 and 2022. Data is only comparable for 2023 and 2024.
- In 2023 the long-term condition question (Q67) was amended to include "Autism or autism spectrum condition" as a response option. And the "Neurological condition" answer option was updated to include an example condition changing it to "Neurological condition, such as epilepsy". These changes see the answer option "Neurological condition, such as epilepsy" as no longer being deemed comparable to 2021 and 2022. Data is only comparable for 2023 and 2024.
- In 2023 the ethnic group question (Q71) was amended to include "Roma" as an answer option.
  The ethnic group question is still deemed comparable to 2021 and 2022. Data for the answer
  option is only available for 2023 and 2024.

#### Case mix adjustment

Both unadjusted and adjusted scores are presented in this report. Case mix adjusted scores allow us to account for the impact that differing patient populations might have on results. By using the case mix adjusted estimates we can obtain a greater understanding of how a trust is performing given their patient population. The factors taken into account in this case mix adjustment are 'Which of the following best describes you?', age, ethnicity, deprivation, and cancer type.

Unadjusted data should be used to see the actual responses from patients relating to the trust. Case mix adjusted data, together with expected ranges, should be used to understand whether the results are significantly higher or lower than national results taking account of the patient mix.

#### How trust results are derived

Trust results are derived using the NHS trust where each patient received cancer related treatment. Trust results are presented at the 'National' level, meaning results include patients with addresses in England and elsewhere in the UK. Some patients may receive care at a trust which is not near to where they live.

#### Scoring methodology

Sixty-one questions from the questionnaire are scored as these questions relate directly to patient experience. For all but one question (Q59), the score shows the percentage of respondents who gave the most favourable response to a question. For Q59, respondents rate their overall care on a scale of 0 to 10, of which the average was calculated for this question's score. The percentages in this report have been rounded to the nearest percentage point. Therefore, in some cases the figures do not appear to add up to 100%.

In 2022, following a review of the scoring methodology, a change was made to the scoring of Q12 such that the response option "No, I was told by letter or email" is no longer considered neutral and is now scored as negative.

The full scoring for all questions at a trust level is available in the trust Excel tables available at www.ncpes.co.uk. Excel tables are also available at a national, ICB and Cancer Alliance level.

#### Statistical significance

In the reporting of 2024 results, appropriate statistical tests have been undertaken to identify unadjusted scores for which the change over time is 'statistically significant'. A statistically significant difference means that the change in the result is very unlikely to have occurred by chance.

#### **Suppression**

Data is suppressed for two reasons: to ensure unreliable results based on very small numbers of respondents are not released, and to prevent individuals being identifiable in the data.

In cases where a result is based on fewer than 10 responses, the result has been suppressed. For example, where fewer than 10 people answered a question from a particular trust, the results are not shown for that question for that trust.

For trusts with an eligible population of 1,000 or fewer, data relating to the respondent and their condition has been suppressed where 5 people or fewer were in a particular category. In instances where only one has been suppressed, the next lowest category has been suppressed to prevent back calculation from the total number of responses.

#### **Additional suppression**

Additional suppression happens if only one trust has a score suppressed. If this happens, we will suppress another trust's results (both the trust level and subgroup results for the question) based on the next lowest number of respondents for the score. We do this so that the national score cannot be used to work out the score for the individual trust.

The same rule applies to groups in each subgroup breakdown. For example, if only one trust has the 85+ age group suppressed for Q25 we will need to suppress another trust's results for the 85+ age group on Q25. This suppression is based on the 85+ age group with the next lowest number of respondents for Q25.

## **Understanding the results**

This report shows how this trust scored for each question in the survey compared with national results. It is aimed at helping individual trusts to understand their performance and identify areas for local improvement. Below is a description of the type of results presented within this report and how to understand them.

#### **Expected range charts**

The expected range charts in this report show a bar with the lowest and highest score received for each question nationally. Within this bar, an expected range is given (within the grey bar) and a black diamond represents the actual score for this trust.

Trusts whose score is above the upper limit of the expected range (in the dark blue) are positive outliers, with a score statistically significantly higher than the national mean. This indicates that the trust performs better than what trusts of the same size and demographics are expected to perform. The opposite is true if the score is below the lower limit of the expected range (in the light blue); these are negative outliers. For scores within the expected range (in the grey), the score is what we would expect given the trust's size and demographics.

#### **Comparability tables**

The comparability tables show the 2023 and 2024 unadjusted scores for this trust for each scored question. The Change 2023-2024 and Change overall columns show whether the scores show a statistically significant variation between years. This is shown between 2023-2024 and as an overall between 2021-2024. An upwards arrow indicates a statistically significant increase, a downwards arrow indicates a statistically significant decrease, and no arrow indicates no statistically significant change.

The adjusted 2024 score will also be presented for each scored question along with the lower and upper expected range and national score. Scores above the upper limit of the expected range will be highlighted dark blue, scores below the lower limit of the expected range will be highlighted light blue, and scores within the lower and upper limit of the expected ranges will be highlighted grey.

#### Subgroup breakdowns

Unadjusted scores are shown for tumour group, 'Which of the following best describes you?', age, IMD quintile, long-term condition status and ethnicity breakdowns. Unadjusted scores for the same subgroup across different trusts may not be comparable, as they do not account for the impact that differing patient populations might have on results.

#### **Tumour group tables**

The tumour group tables show the unadjusted scores for each scored question for each of the 13 tumour groups. Central nervous system is abbreviated as 'CNS' and lower gastrointestinal tract is abbreviated as 'LGT' throughout this report.

#### Age group tables

The age group tables show the unadjusted scores for each scored question for each of the eight age groups.

#### 'Which of the following best describes you?'

These tables show the unadjusted scores for the following groups male; female; non-binary; prefer to self-describe; and prefer not to say.

#### **Ethnicity tables**

The ethnicity tables show the unadjusted scores for six ethnicity groups.

#### Long-term condition status tables

The long-term condition status tables show the unadjusted scores for two groups: those who indicate they have one or more long-term conditions and those who indicate that they have no long-term conditions.

#### IMD quintile tables

The IMD quintile tables show the unadjusted scores for five quintiles based on relative disadvantage, with quintile 1 being the most deprived and quintile 5 being the least deprived.

#### Year on year charts

The year on year charts show four columns representing the unadjusted scores of the last four years (2021, 2022, 2023 and 2024) for each scored question.

## National level and England level data

In some cases (389 respondents in 2024), patients from outside England (from Wales, Scotland, Northern Ireland, the Channel Islands or the Isle of Man) are referred to English NHS trusts for treatment. These patients are described as 'Non-England' in the data.

#### National level data (England and Non-England) is used for:

- Response rate section
- National column in comparability tables section
- Subgroup tables section (Tumour group tables, Age group tables, 'Which of the following best describes you?', Ethnicity tables, IMD quintile tables and Long-term condition status tables).

#### England only level data is used for:

- Expected range charts section (as case mix adjustment includes IMD data specific to England)
- · Comparability tables section
- Year on year charts section.

#### **Further information**

This research was carried out in accordance with the international standard for organisations conducting market and social research (accreditation to ISO20252:2019; certificate number GB08/74322). Our statistical practice is regulated by the Office for Statistics Regulation (OSR). OSR sets the standards of trustworthiness, quality, and value in the Code of Practice for Statistics that all producers of official statistics should adhere to. You are welcome to contact us directly with any comments about how we meet these standards. Alternatively, you can contact OSR by emailing <a href="mailto:regulation@statistics.gov.uk">regulation@statistics.gov.uk</a> or via the OSR website.

The 2024 questionnaire and survey guidance can be found on the website at <a href="www.ncpes.co.uk">www.ncpes.co.uk</a>, and more information on the methodology in the Technical Document can be viewed on the website at <a href="www.ncpes.co.uk">www.ncpes.co.uk</a>. For all other outputs at trust level, please see the Excel tables and dashboards at <a href="www.ncpes.co.uk">www.ncpes.co.uk</a>.

## Response rate

#### Overall response rate

6 patients responded out of a total of 12 patients, resulting in a response rate of 50%.

|                       | Sample size | Adjusted sample | Completed | Response rate |
|-----------------------|-------------|-----------------|-----------|---------------|
| Overall response rate | 12          | 12              | 6         | 50%           |
| National              | 135,429     | 127,021         | 64,055    | 50%           |

#### Respondents by survey type

|                     | Number of respondents |
|---------------------|-----------------------|
| Paper               | 3                     |
| Online              | 3                     |
| Phone               | 0                     |
| Translation service | 0                     |
| Total               | 6                     |

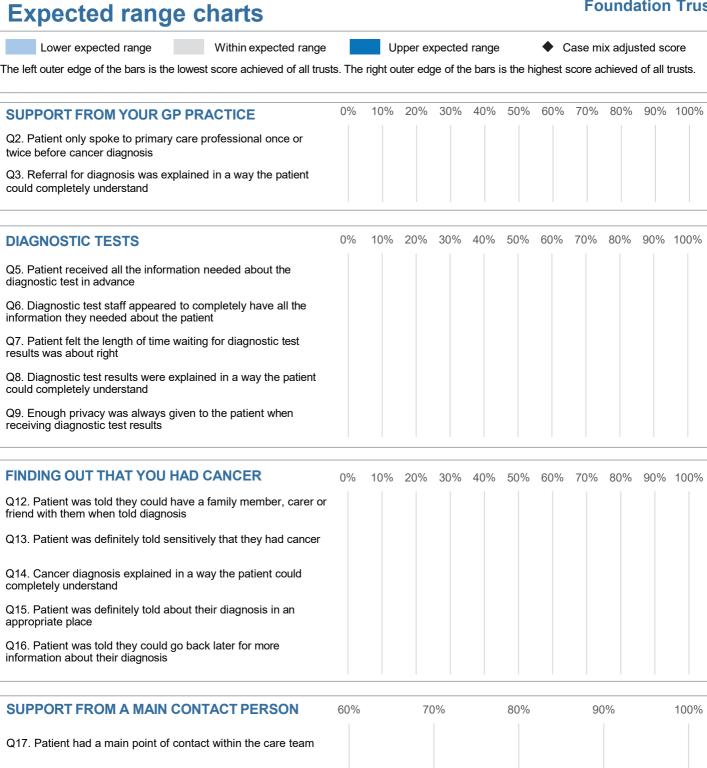

#### Respondents by tumour group

|                  | Number of respondents |
|------------------|-----------------------|
| Brain / CNS      | 0                     |
| Breast           | 0                     |
| Colorectal / LGT | 0                     |
