Executive summary

Questions above expected range

	Case mix adjusted scores			England score
	2025 score	Lower expected range	Upper expected range	
Q58. Cancer research opportunities were discussed with patient	57%	38%	53%	45%

Executive summary

Questions below expected range

	Case mix adjusted scores			England score
	2025 score	Lower expected range	Upper expected range	
Q08. Diagnostic test results were explained in a way the patient could completely understand	75%	76%	82%	79%
Q09. Enough privacy was always given to the patient when receiving diagnostic test results	93%	93%	96%	95%
Q12. Patient was told they could have a family member, carer or friend with them when told diagnosis	77%	80%	87%	83%
Q13. Patient was definitely told sensitively that they had cancer	71%	72%	78%	75%
Q14. Cancer diagnosis explained in a way the patient could completely understand	73%	75%	80%	78%
Q16. Patient was told they could go back later for more information about their diagnosis	82%	82%	88%	85%
Q18. Patient found it very or quite easy to contact their main contact person	79%	81%	88%	84%
Q19. Patient found advice from main contact person was very or quite helpful	93%	94%	97%	96%
Q20. Treatment options were explained in a way the patient could completely understand	80%	80%	86%	83%
Q21. Patient was definitely involved as much as they wanted to be in decisions about their treatment	77%	78%	83%	80%
Q22. Family and/or carers were definitely involved as much as the patient wanted them to be in decisions about treatment options	82%	83%	88%	85%
Q28. Patient definitely got the right level of support for their overall health and well being from hospital staff	73%	73%	80%	77%
Q39. Patient was always able to discuss worries and fears with hospital staff while being treated as an outpatient or day case	74%	75%	84%	80%
Q43. Patient felt the length of waiting time at clinic and day unit for cancer treatment was about right	71%	73%	86%	80%
Q46. Patient was given information that they could access about support in dealing with immediate side effects from treatment	84%	85%	91%	88%
Q48. Patient was definitely able to discuss options for managing the impact of any long-term side effects	50%	51%	61%	56%
Q50. During treatment, the patient definitely got enough care and support at home from community or voluntary services	44%	46%	62%	54%
Q53. After treatment, the patient definitely could get enough emotional support at home from community or voluntary services	25%	26%	40%	33%
Q55. Patient was given enough information about the possibility and signs of cancer coming back or spreading	60%	61%	69%	65%

Introduction

The National Cancer Patient Experience Survey 2025 is the fifteenth iteration of the survey first undertaken in 2010. It has been designed to monitor progress on cancer care; to provide information to drive local quality improvements; to assist commissioners and providers of cancer care; and to inform the work of the various charities and stakeholder groups supporting cancer patients.

The survey was undertaken by Picker on behalf of NHS England and it was overseen by a National Cancer Patient Experience Advisory Group. This Advisory Group set the principles and objectives of the survey programme and guided questionnaire development. The survey was commissioned and managed by NHS England. The survey provider, Picker, is responsible for designing, running and analysing the survey.

The 2025 survey involved 130 NHS trusts. Out of 134,285 people, 64,268 people responded to the survey, yielding a response rate of 48%.

Methodology

Eligibility, fieldwork and survey methods

The sample for the survey included all adult (aged 16 and over) NHS patients, with a confirmed primary diagnosis of cancer, discharged from an NHS trust after an inpatient episode or day case attendance for cancer related treatment in the months of April, May and June 2025. The fieldwork for the survey was undertaken between November 2025 and February 2026.

As in the previous 10 years, the survey used a mixed mode methodology. Questionnaires were sent by post, with two reminders where necessary, but also included an option to complete the questionnaire online. A Freephone helpline and email was available for respondents to opt out, ask questions about the survey, enable them to complete their questionnaire over the phone and provide access to a translation and interpreting facility for those whose first language was not English.

Note on question comparability

The questionnaire was redeveloped for the 2021 National Cancer Patient Experience Survey. Year on year comparisons between 2021 and 2025 are included in this report for most questions. The below should be noted for comparability of results:

- Q23 and Q42: In 2023 the question text was amended. These questions are not comparable to 2021 or 2022, data is only comparable for 2023, 2024 and 2025.
- Q67: In 2023 the long-term condition question was amended to include “Autism or autism spectrum condition” as a response option, and update the answer option “Neurological condition” to “Neurological condition, such as epilepsy”. These answer options are not comparable to 2021 or 2022, data is only comparable for 2023, 2024 and 2025.
- Q71: In 2023 the ethnic group question was amended to include “Roma” as a response option. The ethnic group question is still deemed comparable to previous years, but data for the “Roma” response option is only available for 2023, 2024 and 2025.
- Q51 and Q52: In 2025 the question text was amended. These questions are not comparable to previous years, data is only available for 2025.

How alliance results are derived

Alliance and ICB results are not derived by mapping trust results. Alliance and ICB results are derived using the postcode of each patient. Alliance and ICB results therefore reflect the experience of people referred from within the geographical footprint. This mapping is achieved using lookup files released by the Office for National Statistics. Alliance and ICB results are therefore presented at the 'England' level and exclude other UK postcodes. Please note that due to updates in Cancer Alliance boundaries, historical data has been recalculated for certain alliances.

Case mix adjustment

Both unadjusted and adjusted scores are presented in this report. Case mix adjusted scores allow us to account for the impact that differing patient populations might have on results. By using the case mix adjusted estimates we can obtain a greater understanding of how an alliance is performing given their patient population. The factors taken into account in this case mix adjustment are 'Which of the following best describes you?', age, ethnicity, deprivation, and cancer type.

Unadjusted data should be used to see the actual responses from patients relating to the alliance. Case mix adjusted data, together with expected ranges, should be used to understand whether the results are significantly higher or lower than national results taking account of the patient mix.

Scoring methodology

Sixty-one questions from the questionnaire are scored as these questions relate directly to patient experience. For all but one question (Q59), the score shows the percentage of respondents who gave the most favourable response to a question. For Q59, respondents rate their overall care on a scale of 0 to 10, of which the average was calculated for this question's score. The percentages in this report have been rounded to the nearest percentage point. Therefore, in some cases the figures do not appear to add up to 100%.

In 2022, following a review of the scoring methodology, a change was made to the scoring of Q12 such that the response option "No, I was told by letter or email" is no longer considered neutral and is now scored as negative.

The full scoring for all questions at an alliance level is available in the Cancer Alliance Excel tables available at www.ncpes.co.uk.

Statistical significance

In the reporting of 2025 results, appropriate statistical tests have been undertaken to identify unadjusted scores for which the change over time is 'statistically significant'. A statistically significant difference means that the change in the result is very unlikely to have occurred by chance.

Suppression

Data is suppressed for two reasons: to ensure unreliable results based on very small numbers of respondents are not released, and to prevent individuals being identifiable in the data.

In cases where a result is based on fewer than 10 responses, the result has been suppressed. For example, where fewer than 10 people answered a question from a particular trust, the results are not shown for that question for that alliance.

For alliances with an eligible population of 1,000 or fewer, data relating to the respondent and their condition has been suppressed where 5 people or fewer were in a particular category. In instances where only one has been suppressed, the next lowest category has been suppressed to prevent back calculation from the total number of responses.

Additional suppression

Additional suppression happens if only **one** alliance has a score suppressed. If this happens, we will suppress another alliance's results (both the alliance level and subgroup results for the question) based on the next lowest number of respondents for the score. We do this so that the national score cannot be used to work out the score for the individual alliance.

The same rule applies to groups in each subgroup breakdown. For example, if only one alliance has the 85+ age group suppressed for Q25 we will need to suppress another alliance's results for the 85+ age group on Q25. This suppression is based on the 85+ age group with the next lowest number of respondents for Q25.

Understanding the results

This report shows how this alliance scored for each question in the survey compared with England results. It is aimed at helping individual alliances to understand their performance and identify areas for local improvement. Below is a description of the type of results presented within this report and how to understand them.

Expected range charts

The expected range charts in this report show a bar with the lowest and highest score received for each question nationally. Within this bar, an expected range is given (within the grey bar) and a black diamond represents the actual score for this alliance.

Alliances whose score is above the upper limit of the expected range (in the dark blue) are positive outliers, with a score statistically significantly higher than the national mean. This indicates that the alliance performs better than how alliances of the same size and demographics are expected to perform. The opposite is true if the score is below the lower limit of the expected range (in the light blue); these are negative outliers. For scores within the expected range (in the grey), the score is what we would expect given the alliance's size and demographics.

Comparability tables

The comparability tables show the 2024 and 2025 unadjusted scores for this alliance for each scored question. The columns 'Change 2024-2025' and 'Change overall' include arrows to show if there is statistically significant variation between years. An upwards arrow indicates a statistically significant increase, a downwards arrow indicates a statistically significant decrease, and no arrow indicates no statistically significant change.

The adjusted 2025 score will also be presented for each scored question along with the lower and upper expected range and national score. Scores above the upper limit of the expected range will be highlighted dark blue, scores below the lower limit of the expected range will be highlighted light blue, and scores within the lower and upper limit of the expected ranges will be highlighted grey.

Subgroup breakdowns

Unadjusted scores are shown for tumour group, age, 'Which of the following best describes you?', ethnicity, IMD quintile, long-term condition status, number of long-term conditions and impact of long-term condition(s) on day-to-day activities. Unadjusted scores for the same subgroup across different alliances may not be comparable, as they do not account for the impact that differing patient populations might have on results.

Tumour group tables

The tumour group tables show the unadjusted scores for each scored question for each of the 13 tumour groups. Central nervous system is abbreviated as 'CNS' and lower gastrointestinal tract is abbreviated as 'LGT' throughout this report.

Age group tables

The age group tables show the unadjusted scores for each scored question for each of the eight age groups.

‘Which of the following best describes you?’

These tables show the unadjusted scores for the following groups male; female; non-binary; prefer to self-describe; and prefer not to say.

Ethnicity tables

The ethnicity tables show the unadjusted scores for six ethnicity groups.

Long-term condition status tables

The long-term condition status tables show the unadjusted scores for two groups: those who indicate they have one or more long-term conditions and those who indicate that they have no long-term conditions.

Number of long-term conditions tables

The number of long-term conditions tables show the unadjusted scores for four groups: those who indicate they have one long-term condition, two long-term conditions, three or more long-term conditions, and those who indicate that they have no long-term conditions.

Impact of long-term condition(s) (excluding cancer) on day-to-day activities tables

The impact of long-term condition(s) tables show unadjusted scores for respondents with an additional long-term condition(s) and whether these affect their day-to-day activities.

IMD quintile tables

The IMD quintile tables show the unadjusted scores for five quintiles based on relative disadvantage, with quintile 1 being the most deprived and quintile 5 being the least deprived.

Year on year charts

The year on year charts show five columns representing the unadjusted scores of the last five years (2021, 2022, 2023, 2024 and 2025) for each scored question. Arrows are included to show if there is statistically significant variation between 2024 and 2025 or overall between 2021 and 2025. An upwards arrow indicates a statistically significant increase, a downwards arrow indicates a statistically significant decrease, and no arrow indicates no statistically significant change.

Trust expected range summary

The number of scored questions that fell below, within and above the expected range for each trust within the alliance.

ICB expected range summary

The number of scored questions that fell below, within and above the expected range for each ICB within the alliance.

National level and England level data

In some cases (333 respondents in 2025), patients from outside England (from Wales, Scotland, Northern Ireland, the Channel Islands or the Isle of Man) are referred to English NHS trusts for treatment. These patients are described as ‘Non-England’ in the data.

Overall response rate at response rate sections shows national level counts and response rate. For Cancer Alliances and its comparison at comparability tables section, all data is presented at the England level.

Further information

This research was carried out in accordance with the international standard for organisations conducting market and social research (accreditation to ISO20252:2019; certificate number GB08/74322). Our statistical practice is regulated by the Office for Statistics Regulation (OSR). OSR sets the standards of trustworthiness, quality, and value in the Code of Practice for Statistics that all producers of official statistics should adhere to. You are welcome to contact us directly with any comments about how we meet these standards. Alternatively, you can contact OSR by emailing regulation@statistics.gov.uk or via the OSR website.

To view all outputs and supporting materials for 2025 and previous years, please visit the website www.ncpes.co.uk. This includes:

- All Excel data tables, PDF reports and the interactive dashboard available at national, Integrated Care Board, Cancer Alliance and NHS trust level.
- Analysis of free text data available in the national qualitative thematic report. Free text workbooks are also shared directly with the NHS trust and Cancer Alliance leads.
- The Technical Document, providing more information about the methodology including significance testing, suppression and question comparability.
- Additional resources, including reports which explore key driver analysis for a high rating of care, and a video demonstration on using the outputs.
- The questionnaire, survey guidance and survey materials.

These resources will help users to explore trends over time, analyse results by demographic and clinical subgroups, and benchmark organisations against national scores and other providers.

Response rate

Overall response rate

1,395 patients responded out of a total of 4,015 patients, resulting in a response rate of 35%.

	Sample size	Adjusted sample	Completed	Response rate

SUPPORT FROM YOUR GP PRACTICE

Q2. Patient only spoke to primary care professional once or twice before cancer diagnosis

Q3. Referral for diagnosis was explained in a way the patient could completely understand

DIAGNOSTIC TESTS

Q5. Patient received all the information needed about the diagnostic test in advance

Q6. Diagnostic test staff appeared to completely have all the information they needed about the patient

Q7. Patient felt the length of time waiting for diagnostic test results was about right

Q8. Diagnostic test results were explained in a way the patient could completely understand

Q9. Enough privacy was always given to the patient when receiving diagnostic test results

FINDING OUT THAT YOU HAD CANCER

Q12. Patient was told they could have a family member, carer or friend with them when told diagnosis

Q13. Patient was definitely told sensitively that they had cancer

Q14. Cancer diagnosis explained in a way the patient could completely understand

Q15. Patient was definitely told about their diagnosis in an appropriate place

Q16. Patient was told they could go back later for more information about their diagnosis

SUPPORT FROM A MAIN CONTACT PERSON

Q17. Patient had a main point of contact within the care team

Q18. Patient found it very or quite easy to contact their main contact person

Q19. Patient found advice from main contact person was very or quite helpful

Expected range charts

Lower expected range Within expected range Upper expected range Case mix adjusted score
